DETAILED ACTION

Amendment A received on July 17, 2002 is acknowledged. Claims 1-19 and 21-27 are included in the prosecution of this application. Claim 20 is cancelled.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-19 and 21-27 rejected under 35 U.S.C. 102(b) as being anticipated by Pagano et al (5772988).

Pagano et al disclose a nail composition containing butyl acetate, a polymer with a polar monomer (acrylic acid) and a nonpolar unsaturated monomer, pigments, a suspending agent (stearalkonium bentonite), silicone glycol copolymer, and a plasticizer (glyceryl tribenzoate) in instant amounts (Note examples). The monomers have instant structures (Note columns 2-4). Further, Pagano teaches an aqueous nail enamel composition (Note example 8). The composition can be in a kit (Note example 1) with a cellulose polymer. The nail enamel was tested and has instant nail residual effect (Note example 3).

Response to Arguments

Applicant argues that Pagano teaches a terpolymer obtained by polymerizing three different monomers. It is argued that monomer A is a nonpolar monomer and monomer C is a polar monomer; however Pagano requires monomer B, which is critical

to the polymer composition. Applicant argues that Pagano cannot anticipate the instant claims since amended claims consist of only two different monomers.

Applicant's arguments have been fully considered but they are not persuasive. Applicant bases patentability on the use of two specific types of monomers and the subsequent polymerization to produce a polymer composition with the non-yellowing ability as discussed in Rule 132 Declaration. Further, this non-yellowing property is not recited in the instant claims. As recognized by the applicant, Pagano teaches a polymer composition containing at least two different monomers and instant claims require two different monomers. Further, Pagano teaches the monomers of instant structure. Therefore, Pagano reads on instant claims since instant claim language does not exclude other monomers in the composition. Lastly, applicant uses the term "well-well" which is also recognized by Pagano in general terms on column 9, lines 29-34.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
